

# Tie Down Procedure Scissor Lift

- Attach the trailer to your towing vehicle correctly and move the trailer to a safe location to load the scissor lift, where possible load on flat ground or if on a slope have the scissor be on the higher ground when loading.
  - Extend the ramps and make sure there is a spotter before loading. Approach slowly, making sure the wheels are aligned with the ramps. Load the scissor lift in the center of the trailer making sure the balance is right.
  - Turn the scissor lift off make sure the control unit is secured
- 6 – Attach the straps as shown to ensure that the machine is secure.  
2 x short straps to be used at the front crossed over.  
1 x dog & chain to be used at the back.
